

- Depending on your setup, you might need 2 (or more) rows for each date
- Everyone should have one data table with "raw data" - ALL the information you recorded during data collection
- You may need # categories if you have verbal data
- Make consolidated data tables (2-5) showing averages & restrict the info so that they most easily allow you to answer your question
- to find an average:  

$$= \text{average}(\text{highlight cells})$$
- to find a difference:  

$$= \overset{\text{click}}{\text{cell}} - \overset{\text{click}}{\text{cell}}$$

### TODAY:

- create 2-3 consolidated data tables
- make meaningful graphs or charts from this data
