

Construction tips:

- Minimize Work
- Minimize Waste
- Maximize safety

1. Use the edges of your work piece to minimize the cuts you make!
2. Select wood that's the right size for what you need
3. Plan & Draw your cuts
4. All pieces should be clean, neat, precise angles.
5. Use hot glue for QUICK, non-stressed fastening - use screws & nails for fastening pieces that will experience stress (BOTH! If it's tricky)
6. HOT GLUE → TEMPORARY → CAN BE REMOVED
7. NAILS → TO PREVENT SPLITTING THE WOOD → DULL THE POINT
→ DRILL A PILOT HOLE
8. SCREWS → DRILL A HOLE THROUGH THE FIRST PIECE OF WOOD SO THAT THE SCREW GOES THROUGH THE HOLE.
