

## Velocity Problems / 5 Steps Re-do

*PST*

Your goal is to do this work perfectly in order to a) earn full credit and b) avoid another re-do. Here are some potential issues for you to check on EACH problem:

- Did you **complete** each problem?
- Have you **numbered** the problem and **each** of the five steps?
- Did you correctly identify the **given information** and the **variable** you're looking for?
- Did you find the **correct formula** from the "If You Know" table?
- Did you use your calculator to find the **correct numerical answer** to the problem?
- Did you write your answer with the **correct units**? (Use the "If You Know" table to check.)
- Did you include a **direction** if necessary? (For the velocity equation, both velocity and displacement need a direction; time doesn't.)
- Did you put a **box or circle** around your answer so it is easy to find?
