

Cells:

Your goal is to have a working definition or understand of what cells are and how they work.

All of your explanations and descriptions should make sense to you.

Cell models:

- You will physically construct something that will represent a cell
- Your model won't be a cell - it'll be something that is analogous to cell

cell	→	School
ribosomes	→	classrooms
nucleus	→	main office

Tasks:

- ① Look at, draw, and label at least 4 different kinds of cells from microscopes.
- ② Start brainstorming cell models "thematic idea" (ex. school) + specific analogies (ex. main office=nucleus).
Recap (from Cells Alive) the function of cell structures.
