

We're going to measure the turbidity of the creek!

- You need your own sample in a plastic bottles
- Test & record your turbidity value
- Calibrate & test your calibration first

→ To test your sample:

1. Gently shake plastic bottle
2. Pour into the open glass bottle

3. Shake, wipe clean, and test-record within 5-10 seconds

Same spot

→ In groups of ~5, find average turbidity + low/high values
