

## MOMENTUM:

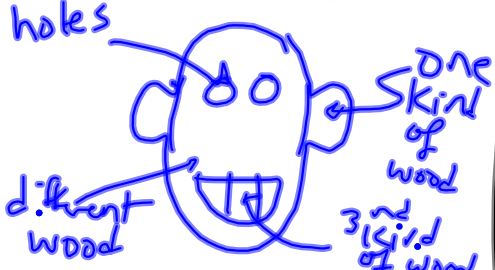

- Momentum makes it hard to stop a moving object
- When there's a collision, momentum allows an object to generate a lot of force

- Mass contributes to momentum
- Velocity contributes to momentum

You will be building momentumometers:

- They need to work well
- They need to be well constructed
- You'll use wood to make an artistic base for your Momentumometer

You can use 8" x 10" of wood  
(one or more types)
