

$$\begin{aligned}\text{Area for cube} &= 6(20 \times 20) \\ &= 6(400) \\ &= 2,400 \text{ cm}^2\end{aligned}$$

--

Cylinder

$$\text{Area of circle} = \pi r^2 \quad (\pi = 3.14)$$

$$\text{Circumference} = 2\pi r$$

Area of cylinder

$$2(3.14 \times 5^2)$$

$$2(3.14 \times 25)$$

$$2(78.5) = 157 \text{ cm}^2 + (40 \times 31.4)$$

Circumference circle

$$2 \times 3.14 \times 5$$

$$10 \times 3.14 = 31.4 \text{ cm}$$
