

Move Your Mass:

Time to work today - submit through Showbie by Wednesday

Tips:

- ① Determine how to calculate friction (if you measure acceleration) on the moving cart
- ② Determine how to predict the acceleration of a cart (assuming you already know friction!)
- ③ Collect data multiple times
- ④

## ⑤ Finding acceleration:

t	x	v
...	...	0.08
...	...	0.01
...	...	0.10

0.3	0.58	0.41
0.32	0.57	0.12
0.34	0.59	0.13
0.36	0.61	0.14
0.38	0.64	0.15

Big 4!

$\Delta t$   
 $\Delta x, x, x_0$   
 $\Delta v, v, v_0$

You know  $F_{fr}$  ... your unknowns are  $T$  and accel.

Friction always opposes motion

$$F_{Fr} = \oplus$$

$$-F_{Fr} = \ominus$$

$$T = \oplus$$

$$-T = \ominus$$

$$-F_{Fr} + T = ma$$
