

R-squared (R^2):

• Right-click, choose "add trendline",
scroll all the way down, select R^2

• Interpret:

→ $R^2 > 0.6$ or more, your
data really seems to make a line

→ $R^2 < 0.6$, your data might
not really make a line

→ If you have less than 4 data
points, your trend & R^2 are
meaningless
