

Chapter 3 and 6 Test Review:

Homework Review - 1.6 and 1.7:

The Coordinate Plane

axes x and y
origin $(0,0)$ ←
 (x,y) ordered pair
quadrants
I, II, III, IV
+ and -

Plotting Points

x	y
2	3
-1	-7

Linear Functions

$$f(x) = mx + b$$

Linear equations —
makes a line when graphed

Standard form

$$4x + 4y = 12 \quad (ax + by = c)$$

$$y = mx + b$$

Slope-intercept form
 $y = -2x + 6$

One y per x (vertical line
doesn't intersect
twice...except...)

$$x = -3$$

Is it a function?

Green = yes

Blue = yes

Red = no

Homework:

p. 209 4-12 (even), 24, 28, 36
