AMI Project Analysis

Use the data you have collected and stored in Excel to answer these questions. Grades will be assigned by effort and thoughtfulness.

- 1. Write your “what is the relationship between question.”**
- 2. Did you find an answer for your question? What did you find out about this relationship? Describe the relationship you believe you have uncovered based on your data.**
- 3. Do you think your study has definitively answered the question you asked? Why or why not? Give specific examples from your study/data collection. (This is where you talk about possible problems with your methods or difficulties with your question.)**
- 4. Ignoring the problems or issues that arose in number 3, why do you think your results turned out the way they did? What factors in the environment might cause the data you collected? (Attempt to make an explanation for the relationship you uncovered.)**
- 5. What things could your group do to be sure of the answer to your question? Are there things you would do different if you did this again?**
