

$x$	$x - \text{vs} - t$	$v - \text{vs} - t$	$a - \text{vs} - t$
Steepness of slopes	Speed • steeper = faster	steepness tells you how rapid the acceleration is •	
sign of slope	direction of motion (+ = one way, - = other)	direction of acceleration a, v same sign • speeding up a, v different signs, slowing down	
Coordinates	object's position at a given time •	object's velocity at a given time •	object's acceleration at a given time •
