

Cartesian Coordinate System

Navigating in A+CAD

and ESNAPS

Important to know about the Cartesian Coordinate System because that is how A+CAD works.

There are 4 primary ways to place something in A+CAD:

1. Just click on the screen with the mouse
(less precise but easy)

2. Absolute Coordinates
(requires a bit of thinking)

3. Relative Coordinates
(easier than absolute)

4. ESNAPS
(easiest and makes things exact)

2. Absolute Coordinates

- WHEN A LOCATION IS REQUESTED,
PUT IN x, y
- DON'T CLICK WITH THE MOUSE

3. Relative Coordinates

- SPECIFY A STARTING POINT WITH THE MOUSE, DRAG THE MOUSE IN DIRECTION OF YOUR LINE, & ENTER A #
 - You MAY WANT ORTHO ON
- OR ENTER @ x, y
 - DON'T FORGET (-) WHEN GOING LEFT OR DOWN

4. ESNAPS (short for "entity snaps")

- MUST HAVE SOMETHING TO SNAP TO
- CAN TURN THIS ON/OFF
- LOOK FOR YELLOW TARGETS
 - ENDPOINT
 - △ MIDPOINT
 - CENTER OF A CIRCLE

TO LABEL THE COORDINATES OF
SOMETHING :

INSERT

↳ DIMENSIONS

↳ ORDINATE

Today:

- 1) CAD2
 - 2) CAD3
- } YELLOW SHEET
PRINT THESE
(LANDSCAPE, USE YOUR
NAME)
