

Project Proposal (Continued)

Biology

For Friday, October 19, 2007:

1. Continue working on your proposal. In particular, focus on clarifying your setup and equipment – the description of your project should allow anyone else (another student, for example) to set up your project **exactly** the way you would want to set it up.
2. Add a list of references for your background information. For now, leave the URL in your paragraphs – but add a section called “References” to the end of your document. You can use Citation Maker to prepare your references - <http://www.oslis.org/APACitations/>.
