

MOMENTUM:

Outside of science -

science
combines
these

- Person/person - collision or force
- A team starts doing really well - and can't easily be stopped

Scientific Definition:

- Things with a lot of momentum will generate lots of force in a collision
- Things with a lot of momentum are hard to slow down/stop

What makes momentum?

Mass \rightleftharpoons Velocity
(neither is more important)

Momentum = mass \times velocity

$$P = mv$$
