Notes for REM – 10/13/2011

I'm at a meeting this morning! Sorry I can't be there to help you.

Here's what you should work on today, in order of priority:

1. Continue adding folder tracks, EQ, and compression to your Challenge 3 project (either Captain or your own tracks).
2. If you're using Captain for your Challenge 3 project, I've copied my mix of the song onto the CV StuShare drive (captain.mp3). You can import this into your project file – solo the track to hear my mix and mute it to hear yours. If you line the mp3 file up with your mix, you can switch back and forth between the two mixes seamlessly so you can do a direct comparison.
3. Add reverb and delay to your Challenge 3 project. Use the document called "Using Reverb and Delay As Send Effects" on my web site for instructions. Make sure you follow these instructions carefully – if you try to add reverb and delay as regular effects on each track, you'll rapidly run out of computing power!

Have fun and I'll see you on Tuesday!
